THE Abridgment of Liddell and Scott's Greek-English Lexicon is intended chiefly for use in Schools. It has been reduced to its present compass by the omission

- I. Of passages cited as Authorities, except where examples seemed necessary to explain more clearly the usage of a word;
- II. Of discussions upon the Derivation of words;
- III. Of words used only by authors not read in Schools, or of the particular meanings of words not in general use, such as medical or scientific terms. But words used by Theocritus, the writers of the Anthology, Lucian, and Plutarch in his Lives, have been retained; and especial care has been taken to explain all words contained in the New Testament.

Words are printed in Capitals, when they are radical forms, or when no form nearer the original Root is known to exist. The Derivation, when it is certain, is placed before the English explanation: when this is not the case, some notice will be found at the end of the word.

Many additional tenses and cases, mostly Homeric or Doric, have been inserted to give a clue to the simple word, when there seemed to be any difficulty or irregularity in the formation. All tenses and forms of words in the Gospels that presented any difficulty have been inserted in their place.

The quantity of doubtful syllables has been marked, except in such tenses of Verbs, cases of Nouns, and words, as are regularly derived. In such forms the quantity ought to be known to young students from grammatical rules.

For the sake of clearness, the parts of which compound words are made up have been marked by placing a hyphen between them, as,  $\delta\pi o - \beta d\lambda\lambda\omega$ ,  $\delta\phi - i\eta\mu\iota$ ,  $\delta - \beta a\tau os$ ,  $\delta\phi - o\delta os$ . But when a word is compounded of two parts, one of which is already a compound, this latter compound is left undivided, and must be sought in its own place, as  $\phi\iota\lambda o - \kappa\iota\sigma\sigma o\phi \delta\rho os$ . And a word immediately derived from a compound is left undivided, so that the elements of the derivation must be sought under the word from which it is derived, as the elements of  $\phi\iota\lambda o\mu o\nu\sigma \delta\omega$  under  $\phi\iota\lambda \delta - \mu o\nu\sigma os$ . In Verbs compounded of a Preposition and a simple Verb, and whenever the component parts remain unaltered by the composition, mere division has been considered sufficient to mark the formation.

The present Edition has been completely revised and has also been considerably enlarged—chiefly by the addition of a number of irregular tenses of Verbs.

A. WITH INDICAT. av makes an assertion, instead of being positive, dependent on circumstances: hence av cannot be joined with pres. or perf., because that which is, or bas been, cannot be made so dependent. with indic.:-with fut. (only in Ep. poets) av expresses that which certainly will bappen, if something else bappens first:-with imperf. av expresses the frequent repetition of an act under certain circumstances, what would always bappen; έλεγεν αν he would say (whenever he had an opportunity); κλαίεσκεν αν he would keep on weeping:—with a orists αν expresses what would have happened on a particular occasion: εἶπεν αν be would bave said. OPTAT. it turns the wish, which the mood expresses when alone, into a conditional assertion. WITH SUBJUNCT. av belongs rather to the particle on which the verb depends, than to the verb it-IV. WITH INFINIT. av is used in cases where the indic. or optat. would be joined with it.av never begins a sentence, and regularly follows the word whose signf. it limits, as είχον ἄν: but when words dependent on the verb precede it in the sentence, av may follow any of them, because, in sense, they follow the verb, as  $\pi p \dot{\phi} \phi \alpha \sigma \iota \nu \ \dot{\alpha} \nu = \epsilon \bar{l} \chi o \nu \ \dot{\alpha} \nu$ πρόφασιν.

The uncial form of Eta (H) was a double **ΕΞ**, and prob. it was so pronounced, as δηλος, (ηλος, from δέελος, ζέελος. The old alphabet had only one sign ( $\epsilon$ ) for the sound of e both long and short, till the long vowel  $\eta$ , with  $\omega$ , was introduced from the Samian into the Athenian alphabet in the archorship of Euclides (B. C. 403) together with  $\omega$ ,  $\xi$ ,  $\psi$ . The sign H, before it represented long  $\epsilon$ , was used for the rough breathing, as HOX for os, which usage remains in the Latin H. When the same H became a vowel, it was divided, so that I represented the rough, I the smooth breathing, whence came the present signs for | a little from the cave.
